***AgriHort Solutions Australia works with horticultural growers, agronomists and resellers to grow our client's yield and quality payday.***

## PROFESSIONAL PROFILE

*Agronomy for me, is all about the numbers. We work on nutrition, irrigation, pest and disease etc but we do this to improve crop health, yield and quality results. The better the results, the better the payday for our clients and the more sustainable the production forecast.*

*By setting the baseline of what your production looks like today and what you want it to look like at harvest time, we work together to identify and maximise factors to multiply your yield and quality payday.*

*Sometimes all that is needed is a shift in trajectory of 2 degrees to significantly change your harvest results and that is all about targeting, measuring and adjusting your agronomy plans to meet crop demands.*

*Our catch phrase is "Harvesting Results" and that is because we are looking to work with growers, agronomists and resellers that want the same thing - Results!*

## EDUCATION

1999 - 2001 **Bachelor of Rural Science - University of New England**

## EMPLOYMENT HISTORY

JULY 2009 – CURRENT - HORTICULTURAL CONSULTANT – AGRIHORT SOLUTIONS AUSTRALIA PTY LTD

*Harvesting results!*

# LIZ SINGH

*Horticultural Consultant*

**M:** 0409 646 490  
**E:** liz@agrihort.com.au  
**W:** www.agrihort.com.au

**AgriHort Solutions Australia works with horticultural growers, agronomists and resellers to grow our client's yield and quality payday.**

## PROFESSIONAL PROFILE

*When I started my career, I visited a grower who had been mulching his vineyard for 10 years because the soil he grew vines in was pure sand. Other growers naysayed the cost and effort but digging showed layers of organic matter that made these vines pure gold.*

*My question was "If this idea is working and delivering the results, why isn't everyone doing it?" The simple matter of fact is that someone has to be the first to give what might become "standard practice" one day a go, e.g - "mulching for improving soil structure, health, nutrient and water retention".*

*I want work with likeminded people, the people with the big ideas, the people that think outside the box or just break the box, the people that follow through. We can so easily lose track of what the yield and quality payday looks like in the day-to-day chaos of farming, but we can leverage the principles of agronomy to be the **first** and to harvest your best yield and quality results.*

## EDUCATION

1999 - 2001 **Bachelor of Rural Science - University of New England**
